BMO

**Your guide to the top
64 "coolest" things
made in Minnesota**

MINNESOTA CHAMBER OF COMMERCE

GROWING MINNESOTA

A message from the Chair of the Minnesota Manufacturers' Council

"Minnesota manufacturers have a long history of turning big ideas into products that make a difference here at home and around the world. The Coolest Thing Made in Minnesota contest is a great way to celebrate that innovation and give Minnesotans a closer look at the incredible products being made across the state.

As manufacturers, we know that innovation does not happen by accident. It takes talented people, strong businesses and an environment where companies can continue to invest and grow.

I am proud to serve as Chair of the Minnesota Manufacturers' Council, the state's manufacturing trade association and in-state affiliate for the National Association of Manufacturers. It is the largest statewide network of manufacturers that provides a direct line to lawmakers, one-on-one business assistance, access to Minnesota suppliers, workforce solutions and high-quality business insurance and employee benefits tailored to manufacturers. These benefits give manufacturers the connections, resources and support they need to find new opportunities and continue to grow in Minnesota.

The Minnesota Manufacturers' Council and the Minnesota Chamber, alongside BMO, are proud to support the manufacturers who make Minnesota a great place to live, work and do business. Congratulations to all 64 companies featured in this year's contest and thank you for showing the world what Minnesota manufacturing can do."

Chad Randick

Vice President of Government Affairs,
Hormel Foods

Granite Partners

GROWING COMPANIES ENHANCING COMMUNITIES

Granite Partners is a private investment firm based in St. Cloud, Minnesota. We partner with retiring owners of niche-leading companies to sustain across generations. With an evergreen structure, we provide long-term ownership, growth resources, and stewardship to create value and enhance wellbeing for all stakeholders.

Advanced Machine Guarding Solutions High Speed Roll Up Safety Door

Advanced Machine Guarding Solutions' High Speed Roll-Up Safety Door is redefining industrial safety and automation. Proudly engineered and manufactured in Minnesota, this innovative door provides lightning-fast access to robotic work cells while protecting workers from hazardous machinery and keeping production moving. Designed for the demands of modern manufacturing, the door opens and closes in seconds, helping reduce downtime, improve productivity, and maintain OSHA-compliant machine guarding. Its rugged construction, high-cycle performance, and seamless integration with safety interlocks make it a trusted solution for manufacturers in automotive, aerospace, food processing, packaging, material handling, and countless other industries. Every High-Speed Roll-Up Safety Door is built by skilled Minnesota craftsmen using American-made materials and customized to each customer's application. From small manufacturers to Fortune 500 companies, businesses rely on this Minnesota-made innovation to create safer, smarter, and more efficient facilities. It's more than a door—it's a product that keeps people safe, supports American manufacturing, and showcases the innovation and craftsmanship that Minnesota is known for.

American Crystal Sugar Company Granulated Sugar

Crystal Sugar isn't just a pantry staple — it's a symbol of Minnesota pride. Grown by our cooperative's 2,500+ growers in the Red River Valley, our sugar beets are processed into the sweet ingredient behind generations of family recipes. As a grower-owned cooperative, we support thousands of local jobs across five factory locations, three of which are in Minnesota; Moorhead, East Grand Forks, and Crookston. From cakes to cookies, pies to pastries, CRYSTAL SUGAR has brought the sweet to your favorite treats for over 100 years. Best of all, it's made right here at home in Minnesota. We believe that's what makes it the coolest!

www.crystalsugar.com

American Peat Technology (APT) Divot Caddy

Divot Caddy is a Minnesota made solution to one of golf's most persistent challenges: repairing divots quickly, consistently, and effectively. Developed by American Peat Technology in partnership with Twin City Seed, this ready to use blend combines sand, Reed Sedge peat, biochar, and grass seed in one easy to apply product, eliminating guesswork and onsite mixing. Its innovative formula retains moisture at the root zone to improve germination and accelerate turf recovery. The particles interlock after application, stabilizing damaged areas for immediate playability while supporting stronger, healthier turf over time. The seed blend can also be customized to match a course's existing turf. Divot Caddy reflects what Minnesota manufacturing does best: combining practical experience, natural resources, and thoughtful innovation to solve real world problems. It saves golf course teams time, produces more consistent repairs, and helps keep playing surfaces beautiful and resilient. Simple to use but scientifically engineered, Divot Caddy is a uniquely Minnesota product that makes every course and every round better.

apg Solutions (apg Cash Drawer) smarttill - self-counting Cash Drawer

Imagine you are a retailer or a restaurant owner, and you have a cash drawer that counts the money itself and that helps you to reduce cash loss. The Minnesota-made smarttill® Solution uses a Cash Drawer with precision weighing technology to automatically calculate the value of every bill and coin inside the drawer. After each transaction, it compares how much cash should be in the till with how much is actually there, all in real time and without slowing down checkout. That means employees no longer need to spend valuable time manually counting cash at shift changes or at the end of the day. Retailers can spot discrepancies immediately, improve accountability, reduce counting errors, and cut cash losses by up to 90%. smarttill helps businesses save time, protect profits, and operate more efficiently. Designed and made in Minnesota, this innovative technology is changing the way retailers around the world manage cash with over 35,000 units installed worldwide.

ATZ Manufacturing Trackchair®

The original Trackchair was engineered for a single purpose—to go where standard wheelchairs cannot. Pioneered by the groundbreaking Trackchair ST, the AXIS 30 represents the next generation of Trackchair. It delivers the same higher performance, improved comfort, and supreme adjustability in a sleeker 30-inch width. Built for hunters, anglers, veterans, and outdoor enthusiasts who refuse to let terrain or mobility challenges limit their freedom, the AXIS 30 effortlessly navigates sand, mud, snow, and water up to 10 inches deep—unlocking places traditional wheelchairs simply cannot reach. Exclusive 3.4 combined horsepower PMDC motors deliver the speed and torque to cover more ground, while a streamlined frame reduces rolling resistance for greater range on a single charge. Eighteen built-in vibration dampeners, tilt-on-the-fly capability, and medical-grade gel and foam cushions create a smoother, more comfortable ride. An adjustable frame, independently flipping arms, and a flip-up footrest make transferring easy and allow a truly personalized fit. At just 30 inches wide, the AXIS 30 offers easier transport in conversion vehicles and smooth passage through narrow trails and standard ADA doors—without sacrificing the all-terrain capability that makes Trackchair legendary. A full range of upgrades and accessories lets you equip it for the exact adventure you want to take.

BLUvera LLC

Future Field Office - Conference Pod

Future Field Office represents the next evolution of construction project environments. Moving beyond traditional jobsite trailers, it delivers an integrated ecosystem of modern, connected workspaces designed to support collaboration, wellbeing, safety, and project execution. Built on principles of industrialization, standardization, and continuous improvement, Future Field Office creates a consistent experience across projects while maintaining the flexibility to scale with customer and project needs. The result is a smarter, more productive workplace that helps attract and support the next generation of builders while enabling teams to perform at their best.

www.bluvera.com

Cambria **Quartz Counter Tops**

Cambria is a quartz countertop and surfacing product that has a variety of uses in homes or businesses such as countertops, backsplashes, floor tile, vanities, fireplace surrounds, wet bars, showers, etc. Cambria consists of pure, natural quartz—one of the hardest and most common minerals on Earth—and pigments and binders. Some of the Cambria designs have the natural look and feel of granite, marble, and other quarried stones, but they all feature superior performance because of Cambria's strength and durability. Cambria is nonabsorbent and nonporous and will not absorb food and liquids. And best of all, it is maintenance free.

<https://www.CambriaUSA.com>

Capsugel by Lonza ResistAid-Arabinogalactan

ResistAid® is a patented larch arabinogalactan that is used as an ingredient for pre-biotics for gut and immune support. It is produced by steam-heating larch wood chips to extract the phenolic and arabinogalactan compounds and then drying the resulting extract. This patented extraction method is unique because it requires no harsh chemicals to release the compounds from the wood matrix, and it means the product remains pure and is structurally unaltered post-extraction. We are the only ones in the world extracting LAG from MN forests.

Clay Coyote Pottery Handmade Flameware Tagine

The Clay Coyote Tagine brings a centuries-old cooking tradition to Minnesota manufacturing. Each tagine is handmade from start to finish in our Hutchinson, Minnesota pottery studio. The base is made from our specialized Flameware clay, engineered to withstand direct heat, allowing cooks to use it directly on the stovetop as well as in the oven. The distinctive conical stoneware lid captures steam and returns moisture to the food as it cooks, creating tender, flavorful meals with very little added liquid. Each Tagine passes through the hands of our Minnesota potters through forming, trimming, drying, glazing, firing, inspecting and finishing. The result is functional cookware, handmade one piece at a time, that combines an ancient cooking technique with modern ceramic engineering and Minnesota craftsmanship.

CMP Attachments

Hydra Bucket

The Hydra Bucket is the most versatile skid steer bucket on the market. We Invented and Patented the attachment that serves as an ultra heavy duty general purpose bucket, but also gives you the option to grind, shred, and pulverize with the carbide toothed hydraulic spinning rake in the heel. The Design: Originally Invented & Patented in the mid 2000's by the former diesel mechanic that founded CMP — Accept no imitations. Hundreds of new owners monthly speak to its popularity. The inception of the HB came about as a solution to prep after utility jobs, following behind cable plows to prep the ground in one pass vs.

tracking down a furrow and running over it with a harley rake that only had one purpose on the job. The multitude of other uses was discovered as more got sent into the field.

The Build: Oversized ball bearings are triple sealed to protect from the elements. Dual cutting edges on either side of the drum cavity increase material's time under contact. High torque hydraulic motor is housed inside the drum for ultimate protection. Welded-on ultra hard carbide mining teeth ensure optimal pulverization. Max required flow is 24 GPM, no high flow required. Most modern skids will run it with no issues. Crossover relief valves help dampen shock to the hydraulic system in the event of a drum stoppage. Bidirectional drum ensures rocks and jams can be reversed out.

Daikin Applied Americas Maverick® II

What makes the Maverick® II one of the coolest things made in Minnesota? It literally helps buildings keep their cool while doing more with less energy. Designed and manufactured by Daikin Applied, Maverick® II HVAC rooftop units deliver the fresh outdoor air that schools, offices, libraries and other commercial buildings need while helping reduce energy consumption and operating costs. Its advanced variable-speed inverter compressors automatically adjust to changing building demands, ensuring exceptional comfort, precise temperature control and efficient performance year-round. Built for high-performance commercial applications, Maverick® II is available in 30-50 ton capacities and delivers up to 20,000 cfm of conditioned air. The system utilizes low Global Warming Potential (GWP) R-32 refrigerant and incorporates energy-saving features like energy recovery, modulating hot gas reheat and intelligent controls that help maximize efficiency while maintaining healthy, comfortable indoor environments. Maverick® II is especially effective in dedicated outdoor air applications, where providing fresh air and controlling energy costs are equally important. Its variable-speed technology knows when to chill out and when to turn things up, matching cooling output to real-time conditions and reducing wasted energy. For colder climates like Minnesota, Maverick® II offers flexible heating options including gas heat, hot water heat and electric heat, supporting sustainability and building electrification goals while delivering dependable comfort through even the harshest winters. Delivered as a complete packaged rooftop solution with a wide range of factory-installed options, Maverick® II simplifies installation while providing building owners with a customized system tailored to their needs. Whether supporting new construction, retrofits or replacement projects, Maverick® II combines performance, efficiency and flexibility in one Minnesota-made package. By combining innovative variable-speed inverter compressors, sustainable refrigerant technology and flexible electric heat capability, the Maverick® II shows why Minnesota is a leader in HVAC innovation. It's a product built to keep people comfortable, reduce energy waste and make commercial buildings a little cooler every day.

Dairy Farmers of America (DFA) **Kemps Ittibitz - Cotton Candy**

Kemps Cotton Candy Ittibitz delivers a fun, nostalgic twist on ice cream with tiny, melt-in-your-mouth pellets bursting with blue and pink cotton candy flavor. Manufactured in Minnesota, this innovative frozen treat combines playful texture, convenience, and quality dairy craftsmanship, creating a uniquely memorable experience for ice cream lovers of all ages.

Duluth Pack **Heritage Leather** **Large Standard Backpack**

An all-time, Minnesota classic backpack, available in a special, waxed Bison Leather. An animal with historic Minnesota ties with leather sourced as a by-product of the meat industry (in the western USA). The leather is then tanned in Milwaukee, WI before being crafted into a guaranteed for life product in Duluth, Minnesota. Our Heritage Leather Large Standard Backpack is one of our most rugged backpacks yet. Built to last, the wax of the Heritage Leather is designed to age finely to make a one-of-a-kind family heirloom. Constructed from premium materials and accented by guaranteed for life and weatherproof YKK zippers, this pack comes ready for work or play, rain or shine. Duluth Pack has been proudly making quality products in the USA since 1882. Our Heritage Leather is a Waxed Bison Leather Product. The wax on these items will intentionally scratch with use to help make each bag unique and one of a kind. This is not the leather itself scratching. You may rewax your item if desired.

Fish House Brands **Jimmy's Original Cole Slaw Dressing**

Jimmy's Original Cole Slaw Dressing is the perfect side to any meal, anytime. Of course, it's a summertime staple, most frequently used in your coleslaw, broccoli slaw and pasta salad; but this delicious dressing brings a sweet and tangy flavor to any dish. What started in 1958 in the kitchen of The Fish House Restaurant, originally located in Stewartville, MN, has quickly become a Minnesota staple. For the past 60 years, three generations of Slightam family members have been making Jimmy's time-honored recipes using the highest quality ingredients. Still made in the same town, we pride ourselves on crafting delicious dressings and dips for all Minnesotans.

Gyro Technic LLC

Gyroplane kits and components

The GT-VX1 is the smallest model of our gyroplane kits. An open-format aircraft provides the maximum exhilaration of flight. A true dirtbike/ go-cart/ jet ski of the sky! Virtually every part is manufactured in-house. This includes the entire airframe, flight control linkages, rotor head, brake master cylinder and calipers, and even the rotor blades themselves. Every part is machined on precision CNC equipment. It is the high level of detail and craftsmanship that draws our customers who will settle for nothing but the best of the best. The parts for each sub-assembly are bagged, labeled, and provided with top-notch assembly instructions and documentation. **A gyroplane differs from a helicopter in that the rotor blades are not powered by the engine. The rotor blades turn in autorotation, while forward thrust is provided by a pusher propeller in the rear. Gyroplanes are highly maneuverable, very forgiving of windy/gusty conditions, and very safe in that they cannot stall or spin like an airplane.

Hearth & Home Technologies Speira Spiral Fireplace from Stellar by Heat & Glo

The Speira Spiral Fireplace reimagines what a fireplace can be, not as a fixture placed within a room, but as a sculptural centerpiece. This spiral-shaped fire feature ignites from the floor and ascends in a graceful vertical climb, bringing movement, warmth and a striking modern aesthetic to any space. Available in four standard heights from 4 to 7 feet, in single- and double-sided configurations, Speira brings architectural drama to residential and high-end commercial settings. Custom sizing and flexible installation options give architects and designers the freedom to incorporate this dramatic fire feature into even the most complex projects. More than a focal point, it's a conversation piece that elevates the atmosphere with timeless sophistication.

Heatmor Manufacturing LLC

Infinity Mattz

Think the SUPERHERO OF PORTABLE ROADS! 18 feet long, 4 foot wide, linkable steel platforms that float! Whether you're laying down temporary roads to get to that hard to reach spot, bridging a gap, giving heavy equipment a solid and trustworthy base or protecting sensitive terrain, Infinity Mattz are designed to deliver a stronger, safer, and built to last revolutionary and reusable solution to your toughest logistics and construction projects. Eco-Friendly Unlike wooden mats that end up in landfills or in rotting stacks, Infinity Mattz are recyclable and repairable. They're built to minimize environmental impact and save you money in the long run. Patented Durability With our patented steel-and-foam core and non-slip coating, Infinity Mattz are built for an extended lifespan—even in the most demanding environments. Safer Worksites Our non-slip coating and secure D-ring system enhance worker safety, reducing the risk of accidents and injuries on your site. No mat hook holes for sandbags. Infinity Mattz has several great types of mats to choose from like bridge mats, temporary road mats, and crane mats, so stop guessing and start calculating. See how much you're losing to wood mats in under 5 minutes. Most project managers are spending \$50,000 to \$100,000 a year on mat replacements without realizing it. Our free ROI Calculator on www.infinitymattz.com shows you the true cost of wood mats vs. Infinity Mattz, including replacements and transportation, so you can make the decision based on numbers, not assumptions. Go with the game changer Minnesota-made Infinity Mattz built by Heatmor in "Hockeytown, USA" Warroad, Minnesota. The builder of Infinity Mattz is Heatmor, located in "Hockeytown, USA" (Warroad, Minnesota). Heatmor has built Minnesota-made quality products like stainless steel outdoor furnaces and safes since 1984! Bridge Mats Infinity Mattz are engineered to act as reliable bridging mats, creating a secure surface for machinery to cross unstable or delicate areas without risk. Our patented construction distributes weight evenly, minimizing ground damage and ensuring safe passage. Temporary Road Mats Infinity Mattz provide a reliable, non-slip surface for creating temporary roads, allowing machinery and vehicles to move safely and efficiently, even in the harshest conditions. Whether it's for construction sites, remote pipelines, or energy projects, our mats ensure smooth transport every time. Crane Mats Our Crane mats may be used to provide an outstandingly stable base under enormous weight for heavy cranes working all day long on major projects like construction, utility, or energy.

Hormel Foods Corporation **Black Label® Microwave Ready Bacon**

HORMEL® BLACK LABEL® Microwave Ready Bacon is a simple idea that solves a common problem: making bacon easier to prepare. Packaged in a microwave-ready pouch, it helps reduce prep and cleanup while delivering the flavor people expect from HORMEL® BLACK LABEL® bacon. Simply pop the pouch in the microwave and enjoy crispy bacon in minutes. Made from hand-cut pork that is seasoned and slowly smoked over natural wood, it offers a convenient option for busy mornings, quick meals and everyday recipes.

www.hormelfoods.com

Jarraff by Prinoth Mini Jarraff Tree Trimmer

We're nominating the Mini Jarraff Tree Trimmer, made in St. Peter, MN. The Mini Jarraff is a remote-controlled mechanical tree trimmer with a telescopic boom allowing it to trim trees with its 24" saw blade up to 55' in the air while the operator of the machine is a safe distance away. Its primary use is for trimming trees on urban rights-of-way to keep branches and trees away from power lines. As added safety while working around power lines, its inner boom meets ANSI 92.2 Category C dielectric compliance. The Mini Jarraff is an industry first, no other competitor offers a remote-controlled tree trimmer. Using the remote control, operators can stay a safe distance away from the tree trimming. Some additional features that make it stand out include articulating wheels that allow the machine's width to shrink down to fit inside a 48" opening (such as a gate), and its safety features that automatically stop machine functions if it senses it's on too dangerous of slope, or the operator comes too close to the machine while working.

www.vm.prinoth.com

Lakehouse Candle Co. Boundary Waters Candle

What if you could bottle the feeling of a Minnesota Northwoods morning? That's exactly what we set out to create with our Boundary Waters Candle. Inspired by the pristine wilderness of Minnesota's Boundary Waters, this candle captures the unmistakable feeling of being Up North—waking up at the cabin, stepping outside into crisp northern air, surrounded by towering pines and the quiet stillness of the lake. Fresh notes of pine, cedar, and juniper come together to recreate that experience, while a crackling wooden wick adds the cozy sound of a campfire to every burn. Each candle is hand-poured in Minnesota using 100% soy wax and thoughtfully crafted fragrances. Boundary Waters has become one of Lakehouse Candle Co.'s best-selling scents, loved by Minnesotans who want to bring a little piece of the Northwoods home—and by those who have visited Minnesota and want to take the feeling of it with them. What makes it especially meaningful to us is that it isn't simply a candle about Minnesota. It was created in Minnesota, inspired by one of Minnesota's most iconic landscapes, and made to celebrate the places that make our state special. From the Boundary Waters to the cabin up north, it represents something deeply Minnesotan: the desire to slow down, get outside, and find peace in the wilderness.

Mann Lake Natural Coated Premium Bee Hive Kit

Mann Lake's Natural Coated Premium Wax Dipped Complete Hive Kit is a fully assembled beekeeping system engineered for durability and performance. Made in the Hackensack, MN, each hive body, bottom board, and telescoping cover is dipped in a proprietary, bee-friendly wax blend at high temperature—sterilizing the wood, boiling out moisture, and letting wax impregnate deep into the grain. The result is weatherproof woodenware built to last up to 25 years in the field, paired with a striking natural finish. The kit arrives ready to use, complete with 10 assembled frames featuring Waxed RiteCell foundation, a reinforced screened bottom board with landing area and entrance reducer, and a notched inner cover beneath the telescoping top. It's a practical, beautifully finished solution for beekeepers starting a new colony or expanding an existing apiary—combining smart manufacturing with real-world reliability.

www.mannlakeltd.com

Mattracks, Inc. **Rubber Track Conversion System**

Mattracks are American-made rubber track conversion systems built in Karlstad, Minnesota, that transform trucks, UTVs, tractors, and equipment into unstoppable, all-terrain machines. From snow and mud to sand and swamp, Mattracks give people, crews, and communities the freedom to go where tires simply cannot.

Miller Manufacturing Company Little Giant® Locking Feed Bin

“The Little Giant® Locking Feed Bin takes everyday feed storage and makes it stronger, more secure, and easier to use. Made in Minnesota and built from heavy-duty BPA-free plastic, it’s designed for demanding environments like barns, stables, garages, sheds, kennels, and homesteads. A foam gasket helps keep moisture out and feed fresh, while the secure one-handed latch provides quick, convenient access. Where the Locking Feed Bin really stands out is its durability and versatility. Our patented, Heavy-duty ergonomic handles feature an impressive 600 lb. tested handle strength, giving users confidence when lifting, carrying, and repositioning heavy loads. Integrated tie-down slots make transportation more secure, while molded stacking rings allow multiple bins to stack efficiently.

Add in a hinged and removable lid, padlock-compatible eyelets, and multiple capacity options, and you have much more than a basic storage container—it’s a purpose-built, Minnesota Made feed storage solution designed to protect what’s inside and stand up to everyday use. The Locking Feed Bin is a product that reflects Miller Manufacturing Company’s continued commitment to American manufacturing. As part of our Buy American initiative, we’re focused on supporting domestic manufacturing, strengthening American supply chains, and bringing more production back to the United States. The Locking Feed Bin is produced right here in Minnesota, where Miller partners with Plastech Corporation on the production of its durable plastic components. This local partnership allows us to combine American manufacturing expertise with a product designed specifically for the needs of our farm, ranch, pet, and homestead customers. This isn’t just a container for feed. It’s a heavy-duty storage solution built to protect, organize, transport, and handle the load.

Nova-Tech Engineering ShrimpWorks

Introducing ShrimpWorks® – the future of shrimp processing. In an industry where machines typically handle individual tasks such as peeling, EZ-Peel, or sorting, ShrimpWorks® stands out as the first truly all-in-one modular system. This innovative platform combines heading, pull deveining, peeling, leg removal, EZ-Peel, and sorting, all within a single compact touchpoint. The result? Unmatched quality of processed shrimp with minimal handling, reduced labor, and the ability to eliminate hold time between harvest and processing.

ShrimpWorks® is a game-changer, especially with its revolutionary automated heading feature, which replaces the traditionally manual process, ensuring precision and consistency across shrimp sizes resulting in meat yield gains. The system's intuitive digital interface allows operators to adjust the presentation of the shrimp at the touch of a button, streamlining the process and eliminating the need for cumbersome hardware changes. Our unique approach to a modular system simplifies cleaning and maintenance. Manufactured with pride in Willmar, Minnesota, ShrimpWorks® embodies local craftsmanship and innovation. Remarkably, 98% of the parts are manufactured in-house, showcasing our commitment to quality and community. After 30 years of manufacturing, we learned and perfected food-grade production, investing in new tooling for stainless steel and 5-axis milling capabilities. We even manufacture our fasteners on Swiss machines, ensuring every component is up to our exacting standards. By researching, designing, engineering, and manufacturing locally, ShrimpWorks® not only supports our community but also brings new global revenue to Minnesota, truly making it a product we're honored to call our own.

www.nteglobal.com/shrimpworks

O'Shaughnessy Distilling Co. American Pot Still

Keeper's Heart American Pot Still Whiskey is the first whiskey distilled entirely at O'Shaughnessy Distilling Co. and the world's first American Pot Still Whiskey. Triple distilled from 100% Midwestern barley and aged four years in virgin American oak, it delivers rich vanilla, caramel, and toasted oak while blending Irish tradition with American innovation.

www.osdistilling.com

Phillips Distilling Co. Prairie Organic Vodka

In 2008, Prairie Organic was founded on the belief that being better to the planet leads to the best spirits. It all began with a handshake agreement between Eddie Phillips (yes, the Ed Phillips whose name is on the bottle!) and three family farms. He asked them to convert their corn fields to organic because he would be their customer for life. Today, our organic corn is still grown by a co-op of family farmers across the Midwest, including the original farmers.

Organic farming means skipping pesticides and herbicides, plus creating wildflower habitat for bees and other pollinators, the unsung heroes who keep our planet healthy. Making organic spirits is more work and higher cost. It's worth it because our quality ingredients come through in the glass: Prairie's flagship vodka has a creamy mouthfeel, light minerality and slightly sweet finish.

We reject the flavor neutrality the vodka category is known for in favor of the nuances of our quality organic ingredients. Then we distill each small batch to taste in Princeton, Minnesota. This means we use only the water and energy we need to deliver Prairie's signature quality and nuanced flavor, and each small batch is taste-tested by a panel of employee experts. And vodka enthusiasts can taste the difference: Prairie Organic Vodka was voted #1 Best Vodka in America by Newsweek Readers' Choice in 2026. We invite you to join us in our mission to drink better and do better!

Pneumat Systems, Inc.

BinWhip

The BinWhip is basically a “weed whipper on steroids”. We manufacture and assemble here in Mankato, and ship worldwide where companies can use our equipment to go into grain bins (and many other types of material silos) FROM THE TOP, instead of sending employees into dangerous situations. Using the BinWhip around the inside of the bin gets buildup and clogs moving again, making the product flow again out the bottom. Pneumat prides on using local whenever possible.

POET BioCO₂

Born on a Minnesota farm, POET's vision is to create American-made bioproducts that strengthen rural communities. One of those bioproducts is POET bioCO₂, a renewable, biogenic liquid carbon dioxide captured during the bioethanol production process. Unlike a majority of commercial CO₂ sources that rely on mining sequestered underground carbon reserves or hydrocarbon-based production that transfer harmful carbon into the atmosphere

that otherwise would have remained sequestered, POET bioCO₂ is produced from a renewable agricultural feedstock. This makes it a more sustainable choice while delivering the exceptional purity and consistency customers depend on. The versatility of POET bioCO₂ makes it an essential ingredient across numerous industries, including beverage carbonation, food processing and preservation, municipal water treatment, fire suppression systems, greenhouse and agricultural applications, and a variety of industrial processes. POET's bioCO₂ can also produce high-quality dry ice, which is utilized for food safety, medical and pharmaceutical transport, cold-chain logistics, and e-commerce shipping. Made from locally grown corn, POET bioCO₂ creates additional value for Minnesota farmers while providing industries with a renewable, high-quality CO₂ solution that supports a brighter future.

Rahr Malting Co. **The Brewer's Standard 2-Row**

If you've enjoyed a cold, refreshing craft beer anywhere in North America, chances are good you've already experienced one of the coolest things made in Minnesota – malt. Specifically, The Brewer's Standard™ 2-Row from Rahr Malting Co (RMC). Rahr Malting Company was founded in 1847 by German immigrant William Rahr. Nearly 180 years and six generations later, RMC remains family-owned and operated. Made from a blend of premium barley varieties, The Brewer's Standard™ 2-Row is a widely used base malt, the essential ingredient that gives beer its color, body, and much of its flavor. "2-Row" refers to how the kernels form on the head of the plant, in two parallel rows. 6-Row barley has kernels in – you guessed it- six rows. These days 2-Row barley is the most commonly used type for brewing. Growing barley for malting is more difficult than growing barley for animal feed or other food production, which is why Rahr works with barley breeding programs and a network of expert farmers across the upper Midwest and Canada. These close relationships allow Rahr to support sustainable agriculture initiatives across barley-growing regions

Rose Street Bread Lab

The Rose Fold

The Rose Fold™ Every day in Minnesota, butter and dough begin a journey that cannot be rushed. The Rose Fold™ is Rose Street Bread Lab's name for our disciplined practice of traditional French lamination—a centuries-old technique that transforms simple ingredients into hundreds of delicate layers through precise folding, resting, fermentation and shaping. A typical day of laminated pastry production can span 17½ hours. Our

dough ferments for approximately 17 hours, including an overnight cold fermentation. Across the day's production, our bakers execute dozens of precise lamination turns, building hundreds of carefully engineered layers before a single pastry reaches the oven. The process uses as much as 96 pounds of butter each day—nearly 35,000 pounds annually. Those layers ultimately become butter croissants, pain au chocolat, Danish and kouign-amann. But the finished pastry tells only part of the story. Temperature matters. Timing matters. Fermentation matters. Every fold matters. In an industry increasingly built around speed and convenience, we continue to practice the classical French methods our team was trained to master. Not because we resist innovation, but because some things become extraordinary only when they are given the time they require. Minnesota is known for manufacturing some of the world's greatest innovations. At Rose Street Bread Lab, we are proud to manufacture one of the world's great culinary traditions. The Rose Fold™. Authentically French. Minus the airfare.

Sightline Commercial Solutions Flex Suite

The most exclusive experiences at an event aren't always built in - they can be brought in. Designed and manufactured in Minnesota, Sightline Commercial Solutions' Flex Suite is a modular premium seating system that transforms existing venue space into an elevated VIP environment. Its platforms, architectural railings, drink rails, seating and customizable finishes come together to create a defined destination within the larger venue. The Flex Suite is designed to provide more than a great view. It creates a sense of arrival, access and distinction. That feeling of experiencing an event from somewhere special. Whether overlooking the field, court or stage, each suite gives guests a place to gather, entertain and feel closer to the energy of the moment. An ordinary or underused seating area can become one of the venue's most desirable

destinations. That concept is rooted in Sightline's decades of experience helping shape premium environments at nationally recognized venues, including Minnesota landmarks such as U.S. Bank Stadium, Target Field, Target Center and Allianz Field. Flex Suite brings that expertise into one adaptable, Minnesota-made system. Because modern venues host everything from professional sports and concerts to international competitions, the most desirable location can change from one event to the next. Flex Suite can be relocated or reconfigured to create an exclusive experience wherever it will have the greatest impact. From its Minnesota manufacturing facility to prominent venues across the country, Sightline is redefining what the best seats in the house can be, and where they can go.

Action Plastics Strap Lizard

Strap Lizard is an innovative ratchet strap accessory designed to streamline cargo management by eliminating loose tail ends, dangerous road flapping, and frustrating tangled straps. Compatible with most standard-duty ratchet straps, it allows users to quickly secure excess webbing after tightening a load and clip it neatly into place in under five seconds. Beyond securing cargo on the road, Strap Lizard also winds up ratchet straps for simple, tangle-free storage when not in use, ensuring your gear stays organized, protected from wear, and immediately ready for your next haul. Engineered and manufactured in Minnesota from durable, weather-resistant materials, it makes cargo tie-down and organization fast, clean, and hassle-free.

Suburban Manufacturing Group LubeMinder Automatic Oiling System

The LubeMinder Automatic Oiling System keeps equipment chains and sprockets consistently lubricated without requiring operators to stop and apply oil manually. Used on agricultural equipment such as balers, combines and harvesters, it supports an industry deeply connected to Minnesota's culture and economy. Its adjustable, hydraulically powered pump sends oil to specially designed brushes that remove debris and apply lubricant directly to moving chains. The system requires no electricity and can maintain up to 10 chains and sprockets, helping reduce wear, extend chain life and keep equipment running.

Superior Industries TeleStacker® Conveyor

Born in Morris, Minnesota, the TeleStacker® Conveyor changed how dry bulk handling operations move and stockpile the raw earth minerals used to build our world's Infrastructure. From creating massive stockpiles at quarries and mines to loading ships and barges at marine terminals, it automatically moves side to side, raises and lowers, and extends in and out to place thousands of tons of material exactly where it's needed. Before the TeleStacker Conveyor, much of that work relied on loaders, dozers and trucks repeatedly moving material, while stirring up dust, burning through fuel and generating lots of noise. By doing that work with one automated, electrically-powered machine, fewer pieces of heavy equipment are needed to move material. Like a true Minnesotan, Superior's TeleStacker Conveyor works harder, operates smarter and knows how to be a good neighbor.

Tennant Company

X16 SWEEP

Autonomous Floor Sweeper

SWEEP Autonomous Floor Sweeper Fortify the standard for industrial cleanliness with Tennant's X16 SWEEP: a heavy-duty robot designed with a focus on safety that reinforces a culture of cleanliness and helps to ensure greater flexibility in facility spaces. Ideal for those prioritizing data-driven solutions, the X16 SWEEP helps empower operations. Drive Facility Cleaning Forward with Autonomy The limited human oversight and

assistance required by the X16 SWEEP benefits facilities dealing with labor challenges. The X16 SWEEP serves as a reliable and dependable aid to existing cleaning teams so they can be more hands-on with other high-value tasks. Fast, easy maintenance and an intuitive user interface make the X16 SWEEP simple to use and operate autonomously. Make Way for Around-the-Clock Productivity In a scenario where every pallet and minute hold value, it becomes crucial for facilities to maximize efficiency with their available resources. Any hiccup or unforeseen circumstance can disrupt the entire workflow. The X16 SWEEP is created to be flexible in dynamic environments, enabling operators and managers to reallocate resources as needed without any compromise. Experience a Safe Industrial Clean Utilizes intelligent Brain Corp. software and Tennant's legacy of cleaning expertise to autonomously sweep dust and debris, promoting safety through effective cleaning. Built-in safety features let the machine adapt to your ever-changing needs. As your champion in ongoing innovations, the X16 SWEEP now can help facilities reach a cleaner state with automation made easy.

Tower Solutions, LLC. **PTW-100 Relocatable Tower**

Engineered in Mendota Heights, built in Pine City, MN, the PTW-100 is the tallest, most stable trailered portable tower in the world. Rising to 120 feet in under eight minutes at the push of a button, no permanent infrastructure, anchors or ground penetration required. Its folding outrigger and guy wire system plants a 49-by-49-foot base and holds firm in winds over 100 mph, all while lifting as high as a 5,500-lb payload on top. This is the tower trusted by U.S. Border Patrol, and the U.S. Army, elevating virtual border wall surveillance and mission-critical anti-drone air defense systems that protect our nation's borders and troops. From concept to deployment, it's Minnesota engineering and manufacturing standing watch on the front lines.

T-Rex Cookie Company

Sea Salt Caramel Chocolate Chip Cookie

A half-pound of baked defiance. T-Rex Cookie started in 2015 at a Minneapolis farmers market with a folding table and Tina Rexing's refusal to bake small. Premium and hand weighed, named Best Cookie in America in 2017. Woman-owned, family-run, unapologetically oversized.

www.trexcookie.com

U. S. Steel **Taconite Pellets**

Born out of pure Minnesota grit and innovation, our Taconite Pellets turned what was thought to be “worthless” rock into the ultimate survival strategy for American manufacturing. When the nation’s high-grade iron reserves ran dangerously low after World War II, Minnesota’s scientists and Iron Range miners refused to back down. While researchers engineered a way to rebuild a rock from scratch in the lab, generations of iron miners pioneered new ways to extract and process it. Taconite isn’t just mined; it is crafted. By crushing ultra-hard rock into a flour-fine powder, magnetically harvesting the pure iron, and rolling it into perfectly uniform, marble-sized spheres, Minnesota created the high-performance material that still powers the modern world today.

Vistabule Teardrop Trailers

A Vistabule teardrop trailer is much more than a handcrafted home on wheels. It's the moment the pavement turns to gravel, gravel turns to dirt, and the noise of everything you left behind just stops. A Vistabule is the view you see from the picture window while you enjoy your morning coffee or take shelter from the rain. It is the galley hatch swinging open at golden hour to cook dinner, the light shining through the window in that perfect way you can never capture on camera. It is the ability to camp anywhere, no matter the heat, rain, or snow. It is the thought put into every detail that fills your camping experience with everything you need and nothing you don't. A Vistabule is the rest you get at the end of a long day, ducking into the cabin, and sleeping off the ground. Because a Vistabule doesn't ask you to rough it, it only asks that you slow down. Every curve of the wood interior, every handcrafted detail, and every bit of thoughtful design was shaped by someone in Minnesota who believes camping should bring you closer to nature, not further from comfort. A Vistabule isn't getting away from your life. It is about remembering what it feels like to actually live it. Handcrafted in Minnesota to take you anywhere.
